

How do I rename the buttons in the student view?

Go to Instructor's Control Panel, click the **Course Settings** under Course Option area. Choose **Area Availability** link on the Course Settings page and the Area Availability page will appear as shown below.

This is the option which allows the instructor to turn on and off buttons that appear on the course Web site. Setting a feature to enabled or disabled, adds or removes that feature from the course Web site. The Security option limits access to students only. Guests are not allowed to access secured areas and tools.

To rename the buttons in the student view, you need to click the drop down menu of the button to select the name you need. You cannot create a specific name for your button because there are groups of names setup by default.
